This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

Manœuvres for infantry

PREFACE TO SECOND EDITION.

UNTIL quite recently the tactics of all nations have been based upon the lines or columns of a comparatively rigid nature. The formations were the outgrowth of shock tactics, and all changes were so conservative that they gradually modified the old form to meet requirements quite different from those for which they were originally designed.

It is believed that the time has come to throw off the old form and adopt one more general and more comprehensive.

From the lessons of the recent wars it has been found necessary to scatter troops over a large area, in order to advance under fire with as little loss as possible, and to unite them in small groups, in order to maintain the proper control and direction.

The proposed system of manœuvres resulted from a careful study of the recent wars and of the numerous deductions made from them by military writers of all countries, and from an analysis of the consequences of still further improvements in weapons. It has been further developed by experi-

Digitized by Google

mental drills with infantry and cavalry from time to time for the past eight years.

The following principles are observed as far as possible:

1. To afford means of disposing troops in any general manner whatever by combination of a few simple movements.

2. To organize and manœuvre large and small bodies alike.

3. To manœuvre in the same manner whether the fractions are in line, in square, or in column, in open or in close order.

4. To employ the same commands and terms, as far as possible, always in the same sense.

5. To make every man responsible to his immediate superior.

The manœuvres described in the second part are to be regarded as illustrations of the principles of the new tactics, so far as they apply to infantry, rather than as statutes defining what may be done, to the exclusion of other combinations.

The requirements of a proper system of tactics were brought to light by the great war in America, and further developed by subsequent wars in Europe. Every nation but our own has modified its drill-book to comply with them. Each has introduced such changes as the national temperament has demanded, but it is claimed that the system now presented affords a better solution of the new problems than that of any foreign nation.

Digitized by Google

PREFACE.

In a modern fight a body of troops in action is no longer maintained in rigid masses, drawn up in forms that can be represented by geometrical figures, but assumes all shapes and dimensions that can be imagined, and the parts are grouped in every conceivable disposition. If, however, the subordination of command is maintained throughout, a leader can communicate his orders to these irregular groups as well as he could to the rigid and inert masses of the old tactics.

However troops may be disposed, all possible manœuvres result from a combination of a very few simple movements, such as to advance or to turn, to open or close, to form line, column, or square in any direction. In this system the manœuvres are executed on the simplest principles; they are the same for large as for small units, and the subject of elementary tactics is reduced to the utmost simplicity. A regiment marches, turns, opens, closes, forms line, square, or column, by the same commands and means as a battalion or a company. Even the sections, and the squads and fours, into which a company is subdivided, manœuvre like the larger units, so far as their limited organization permits. Troops in open order, in mass, or even in irregular groups, move in the same manner as when at their normal distance. By this method each man has merely to look to his immediate superior for instructions, and to preserve his position with respect to the proper guide.

Digitized by Google

It is believed that this system differs from others in this important particular, that whereas the latter apply only to a certain limited number of dispositions, this simply provides a language by means of which a leader communicates his wishes to the troops, and which enables him to dispose them in any manner that the various exigencies of warfare may demand. The methods are applicable to all branches of the service.

The principles of the new tactics are illustrated by applying them to those forms that hereafter will be most commonly employed, but they afford at the same time a simple and satisfactory means of executing the manœuvres of any of the other systems.

The first and second parts of the manual relate to ELEMENTARY TACTICS, and show how to move troops wherever they may be required and in any desirable formation. The third part relates to APPLIED TACTICS, and is intended to show what dispositions are most advisable under different circumstances. To illustrate the principles and define the terms of the new tactics, a battalion of four companies has been taken as a type, each company composed of four sections, each section of four or more sets of fours, and each set of fours of four men. The plates show some of the normal formations.

The present work is devoted exclusively to the manœuvres and their application to the varied circumstances of a fight, in order that the merits of

Digitized by Google

the new system may be tested independently of the questions involved in the School of the Soldier and in the customary forms of parades and ceremonies. The system, however, is applicable to all these requirements, but before putting it in its final shape it is desirable to make it more generally known, so that it may be made to conform to all requirements of the service; and the author would feel exceedingly grateful for any suggestions or criticisms.

The second part of the "Manœuvres" corresponds to the DRILL-BOOK, and covers the same ground that has heretofore been embraced in the book of tactics, with the above exceptions. The School of the Company contains a description of many manœuvres that will be omitted from the tactics. These movements serve to illustrate the principles in their varied applications, and each is a type of a similar manœuvre that may perhaps be advantageously practised by one of the larger units. A few of the movements described in the School of the Battalion may also be omitted for similar reasons.

A school for the SET of FOURS would be highly useful to instruct guides, markers, and others in the nomenclature of the system, and prepare them for their duties in connection with the higher units; but this school requires no special description, as the commands and means are readily inferred from the School of the Company and Battalion.

The works of Scott, Hardie, Casey, Coppée, Up-

Digitized by Google

ton and other American writers, as well as the tactics of most of the European nations, have been consulted from time to time, in the preparation of the system, with a view to embodying the most desirable features of each, while simplifying the means of performing the manœuvres. Valuable suggestions have been given from time to time, by officers of all branches of the service, to all of whom the author is deeply indebted, especially to those of the 22d Infantry, and the 8th Cavalry.

Arrangement of Contents.

The subject-matter is presented, first, in a general form; second, these principles are tabulated in the synopsis which follows; third, they are then exemplified by applying them to special cases in Part II., which corresponds to the ordinary drill-book; fourth, the diagrams alone are nearly sufficient to explain the new methods.

It is suggested to the reader that he should first examine the latter throughout the book, and then glance over the Table of Contents and the Synoptical Tables at the end of Part I. These tables are intended to serve as a memorandum of the contents of this part. Part II., however, is written with a view to make it explicit, without reference to the other matter.

The manœuvres appear in their simplest forms when the units and sub-units are at full distance, but it is found to be better to begin the Section

Digitized by Google

Drill in close order, and to practise the same manœuvres at full distance as soon as the men become familiar with the method and acquire more confidence.

In the School of the Company it is better to begin with the sections in close order and the company at full distance. In the School of the Battalion the principles appear in their simple forms, which are necessarily somewhat modified in the lower units on account of their imperfect organization requiring one man to perform the functions that devolve upon several in the higher units.

It is therefore unnecessary to write out a School of the Regiment, Brigade, etc.

Explanation of Diagrams.

In the diagrams on a large scale, the rectangle representing a private is blank; number one has a line through the centre; a corporal is lightly shaded, a sergeant is divided diagonally, a marker is crossed in the centre. The sergeant-major, battalion guides and markers, have a border; a lieutenant is a solid block; an adjutant, a solid block with a border; a captain, a solid block with a cross; a major, a solid block with a double cross and border.

On a smaller scale, companies, sections, etc., are represented by shaded squares, the company-officers and guides by dots, the battalion guides by circles, directors by rectangles, each with different

Digitized by Google

devices to represent their successive positions. The formations for combat, etc., are explained in the text of Part I.

The manœuvres of the battalion are so similar to those of the company that, in general, the same diagram applies to both.

Explanation of Abbreviations.

In General:

U. = Large Unit.	R. = Right.
u. = Small Unit.	L. = Left.
Ch. = Chief.	F. = Front.
D. = Director.	Rr. = Rear.
G. = Guide.	C. = Centre.
M. = Marker.	R.F. = Right Front.

In Tables IV. and V:

R.F. = The unit faces to the right and front.
H. = The unit halts or stands fast.

In Table VIII.:

½U. = Half Unit distance.
0. = No distance.

In describing the manœuvres in Part I. the words that are expressed in the command are printed in SMALL CAPITALS.

In Part II., the original formation is expressed at the top of the page in LARGE AND SMALL CAPITALS.

Digitized by Google

PREFACE.

The commands of the chief in **Full Faced Type**, and those of the subordinate chiefs in *Italics*.

In the text a word in each paragraph is printed in SMALL CAPITALS, to attract attention to the subject-matter of the paragraph.

The initials R.F., L.Rr., etc., refer to the position which each unit is supposed to occupy in the original formation, viz.: The Right Front Section, the Left Rear Section, etc., the number, etc., that follow, viz.: 1*st S.*, 3*rd S.*, etc., indicate that the chief of the right front section gives the command: *First Section*, *Right Dress*, etc. It is to be understood, however, that if any other section, etc., were occupying the same position, the command would be the same, excepting the number of the section, etc.

* The asterisks prefixed to several of the paragraphs and commands indicate that the movements referred to are no essential part of a System of Tactics, but are inserted in this edition of the Manœuvres to explain the application of the principles.

Digitized by Google

MANŒUVRES FOR INFANTRY.

PART I. PRINCIPLES.

ORGANIZATION.

The Normal Organization.

The most convenient form for manœuvring is that in which four UNITS of each denomination are combined in one of the next higher.

Thus the SET OF FOURS comprises four MEN. The SECTION four sets of fours, the COMPANY four sections, the BATTALION four companies, the REGIMENT four battalions, the BRIGADE four regiments, etc.

The units are divided into HALVES, as follows: The set of fours into two SETS OF TWOS, and the section, company, etc., into two SQUADS, PLATOONS, SUBDIVISIONS, WINGS, and HALF BRIGADES, respectively.

Digitized by Google

ORGANIZATION.

The units are commanded by CHIEFS, as follows:

The chief of a set of fours is NUMBER ONE; of a section, etc., a SERGEANT, CAPTAIN, MAJOR, COLONEL, and BRIGADIER-GENERAL, respectively.

The half unit generally has a chief. He does not, however, give tactical commands in the manœuvres, excepting in the formation for combat, and when his command moves as a unit, but he sees that those of the chief of the unit are properly executed.

The chief of a set of twos is the FILE LEADER; the chief of a squad is a CORPORAL; that of a platoon is a LIEUTENANT. No chief is provided in our organization for the subdivision, although one would be desirable. The chief of a wing, etc., is a LIEUTENANT-COLONEL, etc.

The MARKERS define the position of the unit to which they belong, and the GUIDES keep the markers of the subunits in their proper places.

IN ACTION the GUIDES and MARKERS assist the chief in transmitting orders and act as orderlies.

Digitized by Google

Two guides and four markers are assigned to each of the principal units.

The GUIDES for the company, battalion, etc., are SERGEANTS; those for the section are the corporals, who are also chiefs of squad.

The MARKERS for the company, battalion, etc., are PRIVATES. In the section the place of the markers in marching is taken by the corporals, who are guides, and in defining new positions by the sergeants, who are chiefs of section.

Two DIRECTORS are assigned to each of the principal units. It is their duty to supervise the guides and markers and direct the establishment of new positions. For the higher units these duties are performed by the AIDES; for the regiment and battalion, by the ADJUTANT and SERGEANT-MAJOR; for the company, by the lieutenants, who are also chiefs of platoon.

IRREGULAR ORGANIZATION.

A SECTION may be formed of any number of men not exceeding twenty-four, and preferably not less than ten.

Digitized by Google

Each of the OTHER UNITS may embrace any number of the next lower, but preferably not more than four, and unless in very exceptional cases not more than six.

In the imperfect and irregular organizations the PRINCIPLES are carried out as far as possible.

DESIGNATION OF UNITS, ETC.

The several units are numbered in order of the rank of their commanders: FIRST, SECOND, THIRD, FOURTH, etc. They preserve these designations throughout the manœuvres. Each unit is so addressed by its proper commander, but is designated in the commands of his superiors according to its position for the time being, as the FRONT OR REAR, RIGHT OR LEFT, FRONT CENTRE OR REAR CENTRE, RIGHT CENTRE OR LEFT CENTRE, RIGHT FRONT OR LEFT REAR, etc.

The DIRECTING UNITS, GUIDES, and MARKERS are those from whom the positions of the others are regulated.

Digitized by Google

DISPOSITION.

Form.

The following are the principal forms in which troops are disposed: The LINE, in which units are side by side; the COLUMN, in which one is in front of another; the SQUARE, or double column, which in the normal organization is composed of four units so disposed that two form the front line and two the rear line, two the right column and two the left column; and the ECHELON, in which the units are arranged in steps.

The RANK is a line of one man in depth. The FILE is a column of one man in width.

Order.

THE NORMAL ORDER.

The normal order of the UNITS is as follows:

In SQUARE, those with odd numbers in the right column, etc.; the first numbers of each in the front line, etc.

Digitized by Google

In LINE, those with the odd numbers on the right, etc.; the first numbers of each side in the centre of the line, etc.

In COLUMN, those with the odd numbers in the front half; the first numbers in the front of each half, etc.

The normal order of the HALF UNITS is—

In SQUARE and LINE, the first on the right. In COLUMN, the first in front.

IRREGULAR ORDER.

The order of the UNITS, etc., may be inverted in any manner whatever, but the parts of one section, company, etc., should not be mixed with those of another when it can be avoided, and it is preferable, though not essential, that the squads, platoons, etc., should be kept distinct.

ORDER IN OTHER ARMS.

The normal order for CAVALRY is with the men in each set of fours formed in one rank, and numbered from right to left, one, two, three and four.

The other dispositions are similar in all respects to those of infantry.

Digitized by Google

DISPOSITION.

The same nomenclature and dispositions apply to ARTILLERY and to all arms of the service, as far as their nature admits.

DISTANCES, ETC.

DISTANCES are measured from centre to centre, and in any direction. INTERVALS are the spaces between adjacent units not occupied by the body of the units.

The terms full distance, CLOSE ORDER, etc., company distance, etc., are explained below.

AT FULL DISTANCE.

THE UNITS AND HALF UNITS.

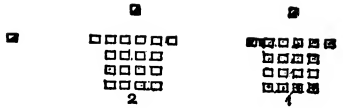
IN SQUARE.

The PRIVATE occupies 46 inches; numbers one and three on the right forming the first TWO, numbers one and two forming the front rank.

The SET OF FOUR occupies 92 inches; the first, third, and fifth on the right forming the first SQUAD, the first and second in the front rank of each squad, etc.

The SECTION occupies a length equal to that of all its fours and one more. This

Digitized by Google



COMPANY IN SQUARE OF SECTION.
SQUARES AT FULL DISTANCE.

COMPANY IN SQUARE OF SECTION.
SQUARES IN CLOSE ORDER.

BATTALION COMPANIES AND SECTIONS.
IN SQUARE AT FULL DISTANCE.

BATTALION COMPANIES AND SECTIONS.
IN SQUARE IN CLOSE ORDER.

Digitized by Google

length is called SECTION DISTANCE, whatever may be the space occupied by the fours. It is the deploying distance for the section.

The first, third, etc., sections are on the right, forming the first PLATOON; the first and second sections in the front of the respective platoons.

The COMPANY occupies a space equal to that of all its sections and one more of average size. This is COMPANY DISTANCE. The first, third, etc., are on the right, forming the first SUBDIVISION, etc., the first and second in front, etc.

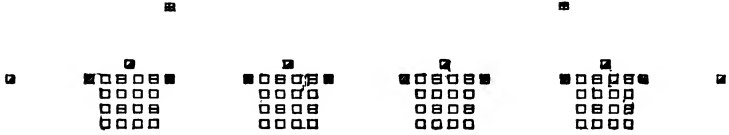
The BATTALION occupies a space equal to that of all its companies and one more of average size. This is BATTALION DISTANCE, etc.

The HIGHER UNITS, when they are at full distance, are disposed in a similar manner.

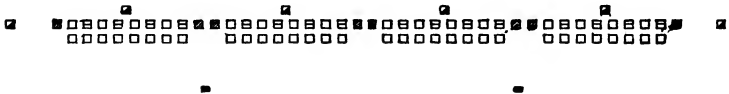
IN LINE.

The space occupied by each unit and the UNIT DISTANCE are the same as in square, but the units in the normal order are arranged side by side as follows, beginning at the

Digitized by Google



COMPANY IN LINE OF SECTION SQUARES AT FULL DISTANCE.



COMPANY IN LINE OF SECTIONS IN TWO RANKS AT FULL DISTANCE.

COMPANY IN LINE OF SECTIONS IN SINGLE RANK IN CLOSE ORDER.

Digitized by Google

right: Third, first, second, fourth. If more than four are present, those with odd numbers on the right of the third and those with even numbers on the left of the fourth in the same order.

IN COLUMN.

The UNIT DISTANCE is the same, but the order is as follows, in the normal organization: The first, third, second, fourth. If more are present, those with odd numbers behind the third, those with even numbers behind the fourth.

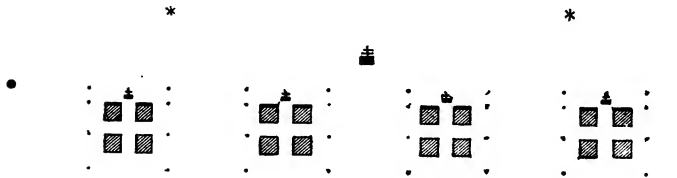
POSTS OF THE MARKERS AND GUIDES.

IN SQUARE.

The SECTION GUIDES on the flanks of the front rank of the front fours, 46 inches distant from the right man. The company GUIDES on the line of the guides of the front sections, and each three-fourths section distance from the centre of the nearest section, so that when this is in square its guide is about half section distance from the company guide.

The COMPANY MARKERS in square, half com-

Digitized by Google



BATTALION IN LINE OF COMPANY SQUARES.

BATTALION IN LINE OF SECTION SQUARES.

BATTALION IN TWO RANKS.

Digitized by Google

pany distance apart. The front markers half section distance in front of the guides. The directing marker five-fourths section distance right or left of the centre of the company. The other front marker half company distance from him. The rear markers behind the front markers.

The BATTALION GUIDES on the line of the front company markers, at three-fourths company distance from the centre of the directing company.

The BATTALION MARKERS in square at half battalion distance. The front markers half company distance in front of the guides; the directing marker five-fourths battalion distance from the centre of the battalion.

The GUIDES AND MARKERS of the HIGHER UNITS are similarly disposed.

IN LINE.

The GUIDES and MARKERS as in square.

The directing guide's distance is taken from the flank unit on the side of direction.

IN COLUMN.

The GUIDES and MARKERS of a column are placed like those of a line which has faced

Digitized by Google

to the side of direction, every man turning in his place.

POSTS OF THE DIRECTORS AND CHIEFS.

IN SQUARE.

The DIRECTORS are directly behind the guides. Those of the company are on the line of the guides of the rear section; those of the battalion on the line of the front markers of the rear companies, etc.

The CHIEFS of the WINGS of the regiments are directly outside the directors, etc.

The CHIEF of section is 46 inches in front of the centre of the front rank of the section. The chief of the company is one-fourth section distance in front of the line of the section guides. The chief of the battalion is one-fourth company distance in front of the company markers.

When a square manœuvres independently the post of its chief is the centre of the square.

IN LINE.

The DIRECTORS and CHIEFS OF HALF companies, regiments, etc., are behind the cen-

Digitized by Google

tres of their platoons, etc., and one-fourth section distance from the rear rank, etc.

The CHIEF of company, etc., is one-fourth section distance in front of the centre of his company, etc.

IN COLUMN.

The places of the DIRECTORS, CHIEFS, etc., in a line which has faced to the side of direction, correspond to their original places, but in the column of march the chief is on the flank of the front unit and at the same distance as in line.

DEFINITION OF SECTION FRONT, ETC.

When all the units are at full distance the sections are at section distance, the companies at company distance, etc., and a section distance is the equal to a SECTION FRONT, a company distance to a COMPANY FRONT, etc. In the normal organization—*i.e.*, when each unit contains four of the next lower—a section front is equal to five times 92 inches, or 12.8 yards; a company front is five times 12.8 yards, or 64 yards; a battalion front is five times 64 yards, or 320 yards, etc. If the section has twenty-four privates, and each

Digitized by Google

other unit has four of the next lower, the section front, etc., are 18, 90, 450 yards, etc.

When the fours and the higher units are in line at full distance, they are at the proper distance to form single rank in close order, or touching elbows.

In Close Order.

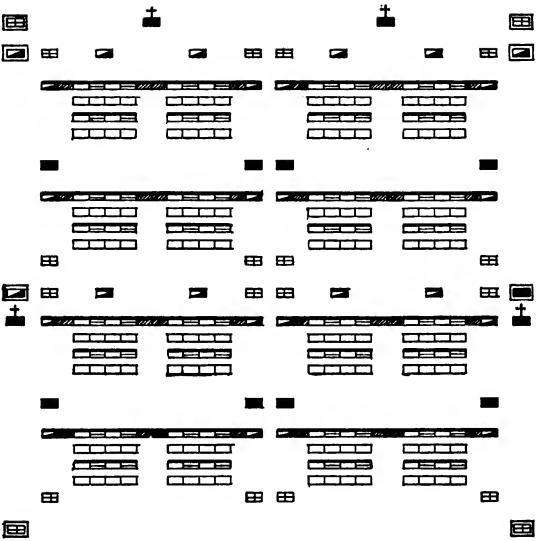
UNITS, CHIEFS, DIRECTORS, GUIDES, ETC.

The units are disposed in the same order as at full distance.

IN SQUARE.

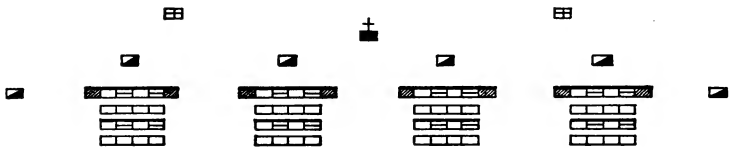
The men are 23 inches apart, so that those in the same rank lightly touch elbows. The fours are 46 inches apart. The section guides touch elbows with the front rank men. The guides of the front sections touch elbows; so do those of the rear sections. The front rank of the rear sections is four times 23 inches, or 2½ yards, behind the rear rank of the front sections. The chiefs of the front sections are 46 inches in front of the centre of the front rank. Those of the rear sections are on the outer flanks of their sections and touch elbows with the section

Digitized by Google

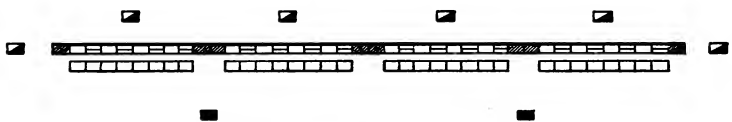


BATTALION COMPANIES AND SECTIONS.
IN SQUARE IN CLOSE ORDER.

Digitized by Google



COMPANY AT FULL DISTANCE, IN LINE OF SECTION SQUARES IN CLOSE ORDER.



COMPANY IN TWO RANKS IN CLOSE ORDER.

Digitized by Google

guides. The company guides touch elbows with the guides of the front sections. The front company markers are 46 inches in front of the guides. The rear markers 46 inches from the flank and 23 inches behind the rear rank. The directors are 46 inches in front of the chiefs of the rear section. The chiefs of the front companies 2½ yards in front of the centre of the front rank. The chiefs of the rear companies 46 inches outside the company markers. The markers of the neighboring companies are 46 inches apart. The battalion guides are 46 inches from the company markers. The front battalion markers 2½ yards in front of the guides, etc.

When some of the units are in close order, and the others at full distance, the dispositions correspond as nearly as possible with the above.

IN LINE AND COLUMN.

In the BATTALION IN TWO RANKS IN CLOSE ORDER, the sections are in close order and the companies and battalion at full distance. The company distance is thus half the company front, and the battalion dis-

Digitized by Google

tance half the battalion front. The dispositions are identical with those at full distance, but all the distances are one-half as great.

In the battalion IN SINGLE RANK IN CLOSE ORDER, the privates and corporals touch elbows. An interval of 46 inches is left between the sections. The battalion in COLUMN in close order is disposed on similar principles. The relative positions are the same as at full distance.

OPEN ORDER.

The dispositions are the same as at full distance, but the distances are preferably two, three, four, etc., times as great.

When the sections are opened out the corporals are 2½ yards in front of the front rank of their squads. The sergeants 2½ yards in front of the front of the rear fours. In marching column they are near the heads of the columns.

The BATTALION IN SQUARE, OPEN ORDER, with the companies, etc., at full distance.

The front battalion markers as far apart

as at full distance, and equally distant from the centre of the battalion.

The rear markers behind the front markers, and half company distance in front of the front markers of the rear companies.

The battalion guides as at full distance.

The BATTALION IN LINE in open order.

The rear markers are on the prolongation of the line of the front markers, and half battalion distance from them on their respective flanks.

FORMATION FOR COMBAT.

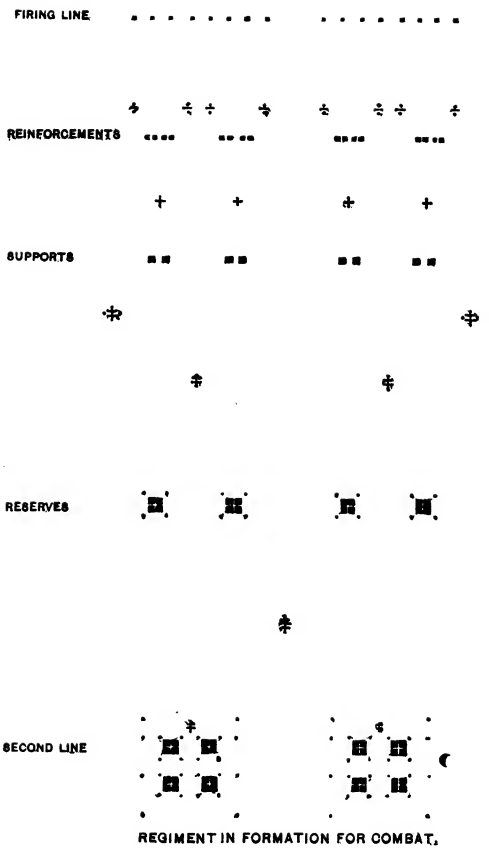
UNITS.

The NORMAL FORMATION of a regiment for combat is with all the units in square.

The battalions of the SECOND LINE and all their companies and sections at full distance, these battalions being at their proper front apart.

The rear companies of the battalions of the first line 400 yards in front of the front companies of the second line, and twice company front apart. These companies are called the RESERVES.

Digitized by Google



REGIMENT IN FORMATION FOR COMBAT.

Digitized by Google

The rear sections of the front companies 400 yards in front of the front sections of the companies behind them, and twice section front apart. These sections are called the SUPPORTS.

The rear fours of the front sections 200 yards in front of the front fours of the sections behind them, and twice their normal front, or 5 yards, apart. These fours are called the RE-ENFORCEMENTS.

The front fours 200 yards in front of the rear fours, and double distance apart. These fours are called the SKIRMISHERS.

A SECOND FORMATION for combat is like the normal form, excepting that the front companies, sections, and fours only are opened out, and the rear companies, etc., are at their proper front, instead of at twice that distance.

CHIEFS, ETC.

When the companies, battalions, etc., are in different lines, the captains, majors, etc., are half way between the rear line and the next line, and the lieutenants, lieutenant-colonels, etc., are half way between the

Digitized by Google

chief of the company, etc., and the most advanced unit of the platoon, etc.

The corporals 2½ yards in front of the firing line.

The sergeants 2½ yards in front of the reenforcements.

When all the units forming a section, company, etc., are in the same line the chief is as far behind the centre as half the distance between the flanks, and the chief of each squad, platoon, etc., is half as far behind its centre. In firing the corporals come up on the line.

Digitized by Google

ASSEMBLY, RALLY, ETC.

To ASSEMBLE a section, company, battalion, etc., is to bring together its parts in the normal order in any of the formations above described. Unless otherwise specified, the assembly is made in line of section squares, the sections in close order, the companies, etc., at full distance.

To RALLY a section, company, etc., is to bring together the parts in the above formation, unless otherwise specified, preserving the original organization in the formation of the assembly, but with the units arranged in any order whatever, and forming upon that first on the ground as a basis.

The assembly and rally may, however, be made at any distance and in any formation by so specifying.

The rally is made at double time without special command, and if under fire the sections take full distance and lie down.

Digitized by Google

FACING, MARCHING, ETC.

When every man turns on his own ground the units are said to FACE to the *right, half right, right rear, right about,* etc., according as their new direction makes an angle of 90°, 45°, 135°, 180°, etc., with the old.

MARCHING is conducted in quick time at half step, or in double time,—the rate is 120 steps of 30 inches in a minute, 120 steps of 15 inches, or 180 steps of 36 inches. The backward step is sometimes used at the rate of 120 steps of 15 inches in a minute.

In marching at route step no regular cadence is preserved, and the rate of march varies with the nature of the ground.

Digitized by Google

CHANGING DIRECTION.

The change of direction is made either by WHEELING or by TURNING. The former is unnecessary, unless it be for parades and ceremonies. Both are made upon one of the guides as a pivot.

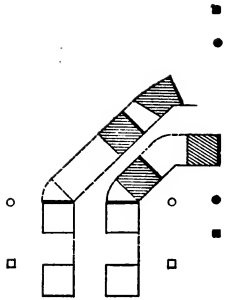
WHEEL.

At a HALT a body of troops WHEELS by simply revolving upon its pivot, all the parts maintaining rigidly their relative positions. On the MARCH the front wheels as at a halt and moves in the new direction, but each of the rear units follows in the track of the unit in front of it.

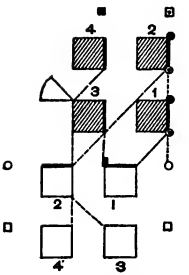
TURN.

To TURN at a HALT each unit proceeds by the shortest path to its new place. On the MARCH the front units move independently to their new paths. The rear units follow them. The units on the flank toward the new direction take the half step, the other units the full step, until the formation is restored.

Digitized by Google



RIGHT TURN.
(MARCHING.)



RIGHT TURN.
MARCH.

Digitized by Google

CHANGING DIRECTION.

At a halt.

At a HALT the several units move to their new positions by combining the direct march with the TURN or OBLIQUE march, according as the change is made toward the new direction or toward the opposite side. The unit having the longest march has the right of way. A turn may be made on the GUIDE OPPOSITE the change of direction as a pivot, by facing about and turning each unit on its new front. For a change of a RIGHT ANGLE or LESS the front units make half the change before and half after advancing. For a change of MORE than a right angle they turn far enough to reach their new positions, while avoiding the units nearer the pivot, which do not advance until the path of the remoter units is free.

In CLOSE ORDER each unit advances until it comes behind its new position, and makes all the change in one turn. The march by the flank takes the place of the oblique. In a long column in close order the turn should be made in double time in order to clear the pivot.

Digitized by Google

Thus, to TURN to the RIGHT at FULL DISTANCE, the front units turn half right, advance, and turn half right again. The left rear unit advances, turns half right, advances, and turns half right. The right rear unit obliques to the left, marches forward, and turns to the right.

To TURN to the LEFT on the RIGHT GUIDE, all face about. The front units make rather more than half a turn to the left, advance, and complete the turn. The left rear unit makes a full turn and advances to its place. The right rear unit makes a full turn, advances, and obliques to its place—all face about.

ON THE MARCH.

To TURN on the MARCH, the front unit on the side of the change makes half the turn, advances at half step, makes the other half turn, and advances at half step. The other front units make half the turn, advance at full step, etc. The rear unit on the side of the change follows the front unit at half step. The other rear units follow at full step until the formation is restored.

Digitized by Google

To TURN in close order on the march, each unit advances until it comes to its new path and makes all the turn at once.

A LINE turns like the front line of a square. A COLUMN like the column of a square on the side of the change.

Marching at DOUBLE TIME, the units near the pivot march in quick time.

A turn from a halt is made like one on the march when it is followed by an ADVANCE.

TO CHANGE DIRECTION BY TURNING THE UNITS.

The units of which a body of troops is composed may all turn simultaneously, each on its own pivot and at any angle.

TO CHANGE FRONT.

A body of troops may be revolved upon its centre so as to CHANGE FRONT to right, left, or rear, as follows: To change front to the right, each unit faces so that the centre of the square shall be on its right and front. It then takes the place of the unit that it is facing, turns to the right, and faces to the new front. A change of front to left is made by opposite means. A change to the rear by turning twice to the right.

Digitized by Google

TRANSPOSING.

General Rules.

Simple transpositions are made without change of direction or distance, by moving the units of which a body of troops is composed at angles of 90°, 45°, or multiples thereof.

One disposition is changed INTO another when all the units that are first on the ground to be occupied by the new formation stand fast, and the others come into position with reference to them. One disposition is said to be FORMED from another when one or more of the units on the new ground moves to another position.

In changing INTO line, column, square, etc., ON a certain unit, this unit stands fast, and the others come into line, column, etc., on it. To FORM line, etc., ON a certain unit, this unit moves by the most direct path to the new ground, and the others form on it as a basis.

Digitized by Google

In forming line from square, and conversely, it is assumed that the ORDER of the units is so far preserved that those units adjacent in line are adjacent in square. If, however, the change is made by each HALF separately, this is not the case, nor if each Half moves as a unit. The latter is called a change BY platoon, subdivision, wing, etc.

It is assumed, unless otherwise specified, that the units will be at THE SAME distance from each other in the new formation.

The COLUMNS of which the SQUARE is composed manœuvre like single columns, and the LINES like single lines, as nearly as possible.

In FORMING square from line it is assumed that the CENTRE UNITS go to the FRONT, and conversely. In forming square from column it is assumed that the centre sections move OUT of the column, and conversely.

The movements described as made to the RIGHT may also be made to the LEFT, unless the contrary is expressly stated, and conversely.

IN CLOSE ORDER.

All the changes are made by moving the units at right angles.

AT FULL DISTANCE AND IN OPEN ORDER.

The changes are made by obliquing whenever the courses of the units can be shortened thereby.

The units always take the shortest route that involves no interruption, if possible. If the paths cross, the unit that has to make the longest march has the right of way. If the lengths are equal, the unit nearest the new directing guide has precedence.

When an oblique march is combined with one at right angles or parallel to the front, the course should be such as not to crowd the units.

SPECIAL.

The following are the principal TRANSPOSITIONS.

goes to the front; the others go to the right and come up behind it.

ON RIGHT CENTRE, etc. UNIT, RIGHT FRONT and left rear INTO COLUMN. The units to the left of that designated go to the right and front; those to the right go to the left and rear into column.

COLUMN TO LINE.

RIGHT front INTO LINE. RIGHT front FORM LINE; ON FRONT CENTRE, etc., UNIT RIGHT FRONT AND LEFT REAR INTO LINE, are made in precisely similar manner.

LINE TO ECHELON.

ON LEFT UNIT FRONT INTO ECHELON. The left unit stands fast; the next advances a specified distance to the front, the next twice that distance, etc.

FRONT INTO LINE. The front unit stands fast, the others come up on line with it.

In all the changes from line, column, and square, it is sometimes indicated that CERTAIN UNITS are to go to the right, left, front, or rear.

HALVES.

The movements of the HALVES and BY the Halves are made in similar manner.

Digitized by Google

OPENING AND CLOSING.

The simple expansion and contraction is made by changing the distance between the units or Halves without changing their relative positions.

The simple opening and closing is made by moving the units at angles of 90°, or of 45° and its multiples.

In opening or closing it is assumed that no unit moves to the rear unless it is so specified, but that in square and column the several units move to the front, and in square and line equally to the right and left. The opening or closing may, however, take place in any direction, if so specified.

If an oblique march is combined with one at right angles or parallel to the front, the oblique is made first in closing and last in opening.

When the square, etc., is opened or closed ON a certain unit, etc., that unit, etc., stands

Digitized by Google

fast, and the others take their positions upon it as a basis.

If all the units, etc., move, the new distances are taken from that marker of the front unit in square, and of the centre unit in line or the front centre unit in column, which is nearest the side of direction.

The lines of which a square is composed may be opened or closed by changing the distance between the columns.

The lines and columns of a square, or the Halves or alternate units, or any designated units, etc., may be opened, closed, or moved in any direction independently, conforming as nearly as practicable to the principles above indicated. Thus the checkered order and others are formed.

COMBAT.

To OPEN a regiment for COMBAT, the front battalions advance the proper distance and open square to double distance, and then the companies and sections do the same, successively.

To open FRONT for COMBAT only those companies, sections, and fours that are sent to

Digitized by Google

the front open out, the others remaining at full distance. Either the front or rear or any designated units of a square, line, or column may be sent to the front by similar means.

The several UNITS are brought into line, opened, closed, etc., on the same principles as from full distance.

COMBINED MANŒUVRES.

Opening, etc., in Transposing.

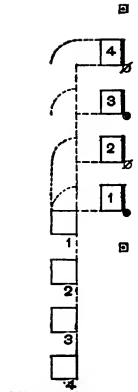
A change of disposition may be combined with an expansion or a contraction. Thus a battalion in line at full distance may be formed into column at double distance or into square in close order, etc.

To Transpose, etc., by Turning.

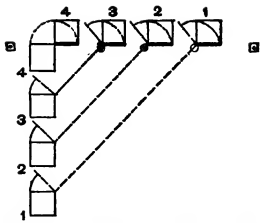
In all transpositions at a HALT the units may move directly to their new positions by TURNING instead of by an oblique or a combined march.

On the MARCH, those units that are to gain ground to the right or left do so by making a turn of a third of a right angle, or 30°. When the lateral distances have been gained, the units that have been moving directly to the front mark time until the new disposition is completed. If the units that are to turn have to fall back, they mark time, or halt long enough to come into position

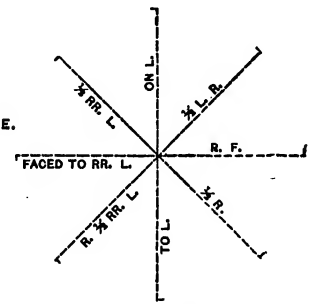
Digitized by Google



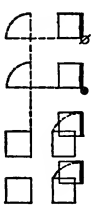
ON RIGHT INTO LINE.



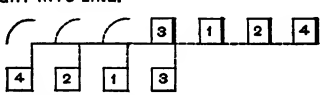
FACED TO REAR RIGHT INTO LINE.



INTO LINE.
FACING IN ANY DIRECTION.



ON RIGHT INTO LINE.



LEFT FORM COLUMN ON RIGHT.

Digitized by Google

without change of gait, whenever this is possible.

The same principles are observed in OPENING and closing, and their combinations.

All these movements are distinguished from those made by obliquing, etc., by substituting the word FORWARD for front.

To Transpose and Change Direction.

When a TRANSPOSITION, OPENING, etc., is combined with CHANGE of DIRECTION of the whole body, the units turn instead of obliquing, etc.

In changing from one formation INTO another, the new line is formed on the directing guide of the unit that forms the basis, and the several DIRECTIONS are called, *To the right, half right, front, half left, on the left, left half rear, faced to rear, right half rear, etc.*, or *left one third, fourth, etc., rear,* or 5°, 10°, *etc.*, or *so many yards,* the latter indicating the number of yards that the guide on the flank opposite to the change has to advance in order to mark the new line.

Digitized by Google

To the right, etc., differs from ON the right, etc., in this, that in the latter the order of the units is reversed, so that in forming into line from column the front unit turns in place or moves an indicated distance, and the others come INTO line ON this unit as a basis. In coming into column from line, on the right, the units pass the right unit, FORMING a column left in front, with its rear established ON the new position of the right unit.

The new positions are otherwise distinguished as RIGHT or LEFT, according to the direction which the units take to reach it—that is, according as the new position is right or left of the old.

Thus a column may be changed INTO line as follows: RIGHT, HALF LEFT RIGHT, ON THE LEFT, HALF REAR LEFT, FACED TO REAR LEFT, RIGHT HALF REAR LEFT, TO THE RIGHT AND HALF RIGHT, the successive fronts making angles of 0°, 45°, 90°, 135°, 180°, 225°, 270°, and 315° with the original front of the column, and the left of the line in each case resting on the original position of the front unit.

A column may also be brought INTO line by

Digitized by Google

first advancing the unit that forms the basis to a new position, etc.

A line, etc., may be formed on any unit as a basis.

A column of which some of the UNITS have CHANGED DIRECTION may be brought into line by specifying the direction with reference to the front of the front unit. For example, part of a column has turned to the right, it may change to the left into line; or to the right, right and left into line. In the first case the rear units move left front into line, and in the second face to rear left into line.

In all cases the DIRECTING guide of each UNIT is the one who will be nearest the basis of the formation after the movement is completed.

Such a change might also be effected by bringing the rear units into position and changing front on the centre of each.

ALIGNING, ETC.

Fixing New Positions.

TRANSPOSING—FIRST DRILL.

To fix the new line with the utmost accuracy, the guides pace off the distances by running, and the directors fix the new line of the guides.

If any units are on the new line, it is established upon them by the directors, who place themselves at its extremities. The guides then establish the markers of the units on this new line, under supervision of the directors, pacing off the distances from the marker already on the line.

If no units are on the new line, the guides pace off the proper distance from the nearest point of the old position to their own places on the new line.

Aided by these measurements, the directors establish the new line and place them-

Digitized by Google

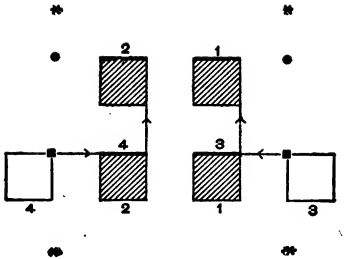
selves at its extremities. The directing guide estimates the proper position of the directing marker of the directing unit; the others are established upon the line by pacing the distances from this point.

Each guide establishes the markers of his own half of the unit—that is, of those fractions that will be next to him.

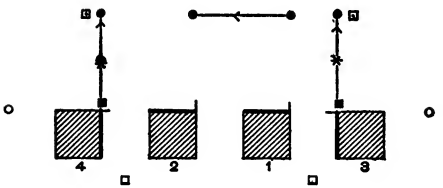
The guide, after pacing off the distances on the new line, faces to the side of direction and steps back far enough to enable the markers of the units to come into his position. This marker faces to the new front and touches gently with his elbow the breast of the guide.

In company movements, where the chief of section takes the place of a marker, the company guide fixes the position of the guide of the section upon whom the latter is to be aligned. The chief of section so places himself as to face to the front in the new position of his section, and so that the elbow of the section guide will lightly touch his own. When it is impossible for the guide to place more than one of the chiefs

Digitized by Google



MARCH.



FORM SQUARE.

Digitized by Google

of section, the other paces off or estimates the distance himself.

The rear markers of the units take their places with reference to the front markers, under supervision of the guides and directors.

The directors and guides go to their new places.

In square the markers of the rear units then take their places under supervision of the directors, being guided by the positions of the units already on the ground, if there are any there, otherwise by estimating their places with reference to the front markers already established.

TRANSPOSING—ADVANCED DRILLS.

After the guides are well instructed in their duties, or when great accuracy is not required, the guides place the markers of the units without aid from the directors, who confine themselves to correcting mistakes and establishing the markers of the rear units.

TRANSPOSING—COMMON METHOD.

When the markers of the units are well drilled they take their places without the

Digitized by Google

aid of the guides or directors, who merely correct their errors. On the MARCH this is the only method.

OPENING AND CLOSING.

In opening and closing, new positions are defined upon the same principles as in the transpositions. If the distances are great, directors do not go to the new line unless to correct the errors made by the guides.

TURNING AT A HALT.

The director of the pivot flank places himself accurately on the prolongation of the new line, the other director on the opposite flank of the line so established. The markers of the units are fixed upon this line as in the transpositions.

TURNING, ON THE MARCH.

In turning on the march, the directing guide marks time until the guide of the nearest unit comes up abreast of him, and then advances in the new direction at half step until the completion of the turn. The other guide hastens to the new front. The markers of the units hasten to their new

Digitized by Google

places on the line of the guides. The directors march on the flanks of the line of the guides until the front units are dressed upon it, and then go to their proper places.

RULES FOR MARKERS.

The markers of the main body of troops which is changing its disposition take their new places with reference to the new places of the units, each marker keeping near the corresponding unit, etc. The markers of the units, etc., step aside whenever it becomes necessary, so as not to interfere with the passage of the units, etc., counting their paces and keeping on a well-defined course. They return to their positions after the units have passed. In line the guides of the sections not on the side of direction step aside whenever it is necessary to admit the passage of the chiefs, directors, etc.

DRESSING.

In dressing to the right, or marching with the guide to the right, the right front unit guide, marker, etc., is the directing unit, guide, etc.

Digitized by Google

In dressing to the left it is the left front unit guide, etc.

In dressing and marching the position of the directing marker is fixed by the chief. Another marker is placed on the line of the front in square or line, and of the directing flank in column. The other markers take their places from them.

The directing guide takes his proper place with respect to the directing marker and the established line. The other guide takes the proper distance from the established line, and from the nearest unit.

The markers of the units are kept on the line of the guides of the larger Unit, and take their distances from the directing guide. The sub-units are established by the guides of the units in the same manner, etc.

The front units, etc., are established on the directing unit, etc., and the rear units upon the front units.

Where the large and small units are in line, the guides of the latter, etc., judge of their proper distance from the neighboring guides, independently of the markers.

Digitized by Google

In dressing by command the directors and those of the units and sub-units come out on the flanks of the line to superintend the alignment, and return to their places after its completion.

After the transformations the units are dressed toward the basis; *i.e.*, toward the units that stand still, or to the side of the directing guide in case a new line is established. All the units that are not required to move are dressed to the side of direction.

Digitized by Google

COMMANDS.

In General.

Object.

A definite command is assigned to each movement in order that the purpose of the commander may be clearly expressed, and it is by no means to be inferred that other commands may not be employed when desirable. Officers and men are always required to obey the commands of their superior whenever their meaning can be comprehended.

Classes.

Commands are given for caution, preparation and execution.

The command of CAUTION attracts attention to the preparatory command or fixes some condition.

If a PREPARATORY command indicates a movement that is to be executed by all the units together, it is not repeated by the chiefs of the units; but if the units have separate movements to make, each gives the

Digitized by Google

proper preparatory command to his unit, causing it to face in the proper direction and to be ready to proceed at the command of execution, which in this case must be repeated at the proper time by the chiefs of the units. The chiefs of fours do not give formal commands, but in open order they are responsible for the proper execution of the commands of their superiors.

SPECIAL.

The command for alignment is only required for instruction. Well-drilled troops are expected to preserve a proper alignment when necessary, whether on the march or at a halt.

After the alignment by command, if the chief is on the directing flank, he gives the command front when the alignment is completed, otherwise the director indicates the completion by returning to his place. If the chief does not wish the director to place himself upon the line, he directs the guide to correct the alignment, and the latter faces to the front when the alignment is corrected.

Digitized by Google

Movements may be executed from a halt in the same way as on the march, by following the preparatory command by the word FORWARD. The march is continued after the change is completed.

All movements may be executed at DOUBLE TIME by so specifying in the command.

The units that take half step when the others are at full step take quick time when the others are at double time.

ABBREVIATIONS.

Commands are ABBREVIATED as much as possible without causing ambiguity. When several movements are to be combined, or executed successively, it is generally sufficient that the command should indicate the final formation that is required.

For example, a regiment is in column of section squares at full distance. At the command, RIGHT INTO TWO RANKS, the regiment, battalion, and companies come right into line, and the sections come into rank, etc.

In abbreviating the aim should be to make the phraseology conform as nearly as possible with the existing usage.

Digitized by Google

COMMON MANŒUVRES.

A large body of troops is habitually MASSED in square or in a line of squares, wholly or mostly in close order, according to the available ground, and with the units disposed in the normal order, viz., with the first and second in front and the third and fourth in the rear.

In MARCHES along a road from one place of assembly to another, in column of section squares in the normal order, that is, with the first platoon, subdivision, wing, etc., in front. In forming column for the march, the sections are in close order, the companies, battalions, etc., at full distance. On taking the route step, the sections open out so as to leave 46 inches between the ranks, and if there is sufficient room they open out somewhat to the right and left. To RE-ASSEMBLE, they are brought into square by platoons, subdivisions, etc.

To DEPLOY the mass, the regiments, bat-

Digitized by Google

talions, etc., successively come into line to the front at the requisite distance. To reassemble, the companies, battalions, etc., successively form square.

On approaching the enemy, the battalions, etc., open square, and the lines take their proper distances for COMBAT.

A very few of the SIMPLEST manœuvres are therefore quite sufficient to form troops for a fight, but to enable them to fight to advantage the most careful instruction and diligent practice in applied tactics are requisite. This should, if possible, be conducted on varied ground. The more COMPLICATED movements have the advantage of saving time and distance. The practice of these movements in the School of the Company and Battalion will serve as instruction for their use by the higher units.

Opposite Marker one-half unit distance in front of line of unit markers, and one-half Unit distance from Directing Marker.
Rear Marker on side of direction one-half Unit distance behind Directing Marker.
Rear Marker on opposite side behind Front Marker on this side, and abreast of Rear Marker on side of direction.
Directors behind Guides and on line with front markers of rear units.
Chiefs of Halves on flanks of Directors and near them.
CHIEFS OF UNITS in front of centres of Units one-fourth sub-unit distance from the front rank.
Line. Same, excepting that DIRECTORS are behind centres of Half Units, one-fourth sub-unit distance from front rank.
Column same as line faced 90° excepting that on the march CHIEFS advance to flank of front unit.
CLOSE ORDER. Same except distances—see Table VIII.
OPEN ORDER. Same except DIRECTORS, who in squares are abreast of centres of Half units, and Rear MARKERS, who are one-half unit distance in front of markers of rear units.
FORMATION FOR COMBAT. Directors, Guides, and Markers go to the Chief.

Digitized by Google

III. Assembling, Etc. (p. 27).

To Assemble, is to bring together units and sub-units in normal order.
To Rally, is to bring together all units and sub-units in any order.
Both may be made in any formation and at any distance.

Marching (p. 28).

	No.	Length.
Quick Time	120	30″
Double Time	180	36″
Half Step	120	15″
Backward	120	15″
Route Step	?	?

Facing (p. 28).

45°	Right Half	Right Oblique.
90°	Right	Right Flank.
135°	Right Rear	Right Rear.
180°	About	To the Rear

IV. Changing direction (pp. 29–33).

At a Halt each unit goes to its new place.
Direct march of unit combined with turn to side of direction, or with an oblique to opposite side.
For a turn of a right angle or less the units make half the turn before advancing.
For a turn of more than a right angle, the units turn as far as possible, while avoiding the units near the pivot.
In close order, the units make all the turn at once, and march by flank instead of obliquing.
A turn on guide opposite to direction of change, made by facing about.
To turn as on the march, command *Forward* should follow.
On the March each unit goes to its new path.
If no time specified, units near pivot take half-step, others full step until formation is restored. If double time specified, pivot units take quick time.
With a long column in close order, double time must be given.
A Change of direction may be made by turning the units.
To Change Front, each unit so faces that centre of a square is Right and Front.

V. Transposing (pp. 34–42).

In General.

Into. All units first on ground of new position stand fast.
Form. One or more of such units move to a new place.
Into on. The designated unit stands fast.
Form on. The designated unit moves straight to new ground.
Movements, etc., described as Right, may be also Left.
In manœuvres by units and not by halves—
The units adjacent in line are or have been adjacent in square.
Forming square from line the centre units go to the front and conversely.
Forming square from column the centre units move out of column and conversely.
Manœuvres by Halves, the common method of forming column from square and conversely.
Executed like manœuvres from line to column by units.
Units take shortest route that involves no interruption.
When paths cross unit having longest to march has right of way.
If length of march equal, the unit next new directing guide.
Routes must be taken that will avoid crowding.

Simple Transpositions.

At Full Distance and Open Order. Made by direct and oblique march; 90° and 45°, etc.
In Close Order. Made by direct march only; 90°, 180°, etc.

Compound Transpositions.

Made by a turn of units instead of direct march at command Forward.
Movements may all be made on march by a third turn to gain lateral distance.

Digitized by Google

VI. Opening and Closing (pp. 43–46).

Simple Expansion, Etc. Direct and Oblique 90° and 45°, etc. Oblique first in closing, last in opening.
Units, etc., aligned on one that stands fast.
Unless otherwise specified, no unit goes to rear. Units go equally to right and left.
Lines, columns, or alternate units may move independently.

Open for Combat. Units advance and open out alternately.
To open **Front** for combat, designated lines open and advance alternately.
Units come **into** line, **form** line, etc., as at full distance.

VII. Combined Manœuvres (pp. 47–52).

To transpose open, etc., by turning, *insert* command Forward.
To transpose open, etc., and continue march, *add* command Forward.
On march, directing unit marks time, when others have spread out.
Unit that should lose ground, marks time at first.
To make successive manœuvres at head of column, or flank of line, *prefix* the command Head of Column, Right of Line, etc. Each unit changes gait, direction, or distance, or makes transpositions as specified.

0°	*To the Front* Left *forward* into Line, etc.
45°	Half Right Left *forward* into Line, etc.
90°	On Right, *forward* into Line, etc.
135°	Right Rear *Right form* into Line, etc.
180°	Face to Rear, *Right form* into Line, etc.
225°	Left Rear, Right *form* into Line, etc.
270°	To Left, *Left turn* into Line, etc.
315°	Half Left, *Left forward* into Line, etc.

To change direction in transposing—
The direction of new front is estimated from front unit.
Front unit may advance or turn at beginning of manœuvre.
The new front may make any angle with old, estimated from front of directing unit.
In every case the directing guide of the unit is the one who will be toward the basis after the completion of the manœuvre.

Digitized by Google

VIII. Fixing New Positions (pp. 53–57).

First Drills. Directors fix new line.
Guides pace off distances on it for markers.
If no unit is on the new line—
Guides pace to their new positions.
Directors go to the ends of the line to fix it.
Directing Guide estimates place directing unit.
Guides pace off places for markers on the line.
Rear Markers and markers of rear units go to places.
If a unit is on the new line—
Guides pace distances on line from unit.
Directors go to ends of the line and fix it on unit.
In opening, if distance is great, Directors need not go to new line,
Advanced Drills. Guides place markers without aid from Directors.
Common Method. Markers place themselves in new positions.
On the March. Markers go at once to new positions.

Dressing (p. 58–60).

In General. Markers define position of units.
Guides keep markers of units on line defined by Markers.
Directors supervise Guides and Markers.
Directing Guides, Markers, etc., those from whom others established.
Directing Unit, Etc. In Square and Column—Front; in Line—Flank.
Dressing by Command. Chief fixes directing Marker and line.
Other markers take their places accordingly.
Directing Guide takes his position from line and Marker.
Opposite Guide takes his position from line and nearest unit.
Markers on line of Guide distances from directing Guide, etc.
Front units from directing units.
Rear units from front units.
In line both Guides and Markers estimate distances.

IX. Commands (pp. 61–63).

Chiefs of units give them when units move separately, except that chiefs of fours do not give commands, but are responsible that fours execute them properly, in open order.
Commands should be abbreviated, when possible without ambiguity.
In general, only the final formation need be specified.

X. Necessary Manœuvres (p. 64).

Assemble.	Face.	Turn.	Form Square.	Right Form Column.
Rally.	March.	Open and Close.	Into Line.	Left Into Square.

PART II. FORMS.

SCHOOL OF THE SECTION.

ORGANIZATION, ETC.

A SECTION consists of one sergeant, two corporals, and from 10 to 24 privates.

It is divided into two SQUADS commanded by the corporals, who are also the guides of the section.

The private highest in rank in each set of FOUR is the chief of the set of four.

IN SQUARE the first squad is on the right, etc.; the first four is right and front, the second four left and front, etc.; number one of each set of fours is right and front, three right and rear, etc.

SECTION.

THE ASSEMBLY, ETC.

The section is assembled for roll call as follows: The SERGEANT goes to a point 46 inches in front of that where he wishes the centre of the front rank to rest, and commands:

S. Fall In.

The senior CORPORAL takes his place where the right of the section is to rest, and faces to the front. The junior corporal on the prolongation of the front of the section, a little beyond the left flank. The MEN take their places in succession on this line, forming on the left of the senior corporal, the first two lightly touching elbows, the third 46 inches from the second, the fourth touching the elbow of the third. The junior corporal now takes his place on the left of the rank so formed, and then a second rank of four privates falls in behind the first at a distance of 23 inches from it, a third rank 46 inches behind the second, a fourth 23 inches behind the third, and a fifth 46 inches behind the fourth, etc.

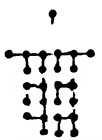
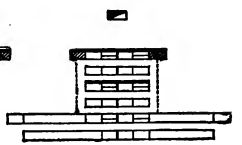
CLOSE UP.



RIGHT DRESS.

RIGHT FACE.

INTO RANKS.



FORM SQUARE.

RIGHT DRESS.

Digitized by Google

THE ASSEMBLY, ETC.

For parade the men may be disposed with regard to their height.

The CHIEF of section then calls the roll, the chiefs of squad face toward their squads, and observe the disposition of the men as they answer to their names. After calling the roll, the chief of section inspects the section, and makes such changes in the disposition as may be required. If the men are recruits, the chiefs of the squads point out the *first four*, *second four*, etc., and see that the men understand where they belong. The designations of the fours are retained until another assembly or rally.

THE SECTION HAVING ASSEMBLED, either for roll-call or combat, the sergeant commands:

Close Up.

The first set of four takes a short side step to the left, and the others close upon them so as to leave a distance of 23 inches between the ranks and files.

Digitized by Google

SECTION.

THE ASSEMBLY, ETC.

To ASSEMBLE FOR ACTION, the sergeant cautions the men to fall in according to their rank.

The section is assembled in the formation above described, but the privates fall in as follows: The highest in rank take their places as the right front men in the first, second, etc., sets of four; the next, as left front men, etc.

After the men have thus been assigned to places in the section, to reassemble in the same order the sergeant places the corporals to fix the front of the section, and commands:

S. Assemble in Square, March.

The men take their places as above explained. If a private is absent his place is taken by the next in rank in his set of four.

S. Assemble in Line, March.

The section is assembled in the same manner, excepting that the third and fifth fours are assembled on the right of the first and the fourth and sixth on the left.

Digitized by Google

SECTION.

THE RALLY.

S. Rally by Squad.

The men all run to the corporal. The first who arrives takes his place in front of the corporal 46 inches from him, and facing him; the next on the left of the first, the next behind the first, etc., forming two files as in falling in for roll call, and without regard to rank or previous position in the section. Each man, however, carefully observes his place in the squad which determines the four to which he is to belong.

S. Rally by Section.

If the squads are rallied each corporal runs with his squad to the sergeant, and the section is formed in square facing him. The corporals take their places as guides. If the squads are not rallied the men run directly to the sergeant and form as for roll call.

Digitized by Google

THE RALLY.

* S. Rally in Square.

The men in each four form on the chief of fours, who runs to the sergeant. The first four that arrives takes its place in front of the sergeant to form the right of the section. The next four forms on the left of the first, the next behind the first, etc.

* S. Rally in Line.

The fours are conducted to the sergeant as above. The first that arrives forms in front of the sergeant, and each of the others on the nearest flank.

The section may also be rallied on any designated four or squad, or on a guide who may be sent forward to select a new position.

Digitized by Google

SECTION.

Square in Close Order.

8. Right Dress.

The sergeant goes to the right of the front rank, and corrects the positions of the guides if necessary.

The FRONT RANK men of the FRONT fours, and the left front men of the rear fours, turn their heads and eyes to the right. The right guide cautions the front men of the right front four to move up or back till they are on a line with himself and the left guide. The other men in the front rank place themselves on this line, and each touches gently the elbow of the man on his right. Each REAR RANK man places himself 23 inches behind the front rank man, and in each set of fours the left front man places himself abreast of the right front man, gently touching his elbow. The RIGHT FRONT man of the RIGHT REAR four places himself 23 inches behind the right rear man of the four in front of him. The right front man of the LEFT REAR four places himself behind the right rear man in front and abreast of the front rank of the right

Digitized by Google

rear four. When the CHIEF of section sees that his section is aligned, he commands:

Front.

The men turn their heads and eyes to the front. The section is now in SQUARE IN CLOSE ORDER. Whether on the march or at halt the men are responsible for their ALIGNMENT, but do not turn their heads without command, excepting as indicated hereafter.

SQUARE IN CLOSE ORDER.

S. Right Face, Forward.

Each GUIDE goes to the left of the new front rank of his squad. The guide is left, and each man conforms to what was required of the man in a corresponding position in marching to the front.

Whenever the section marches by the flank the rear squad falls back to 46 inches and when the section halts it closes up.

If the command is,

Forward, Guide Left, or Right,†

the guides shift to the right and left of the new front rank.

*If the section is FACED again to the right, the guides go to the rear rank of their own squads.

*If a section faced to the rear is again faced to the right, left, or front, the guides return to their places in the front rank unless the guide is named, in which case the guides go to the new front.

† In obliquing it is not necessary to indicate the guide, nor after facing half right or left, nor in turning nor changing direction.

At a Halt.

8. Right Turn.

The right guide faces right.

March.

The right man of the right four takes a short step forward, turns to the right and places himself on the left of the corporal, and the others of his four form upon him.

The left four advances 69 inches, when the right man turns to the right and takes a half-step until the others come up, and then retakes the full step and forms on the left of the right four.

The left rear fours advance and turn in the same manner.

Each right rear four obliques and advances until the right man is in his place, and then turns into its new position.

On the March

The section turns in precisely the same manner, excepting that no movement is made

Digitized by Google

until the command of execution, when the right guide turns to the right, marks time, and as soon as the right man has come up on his left he marches at half-step in the new direction.

The rear fours follow their front fours as closely as possible and turn on the same ground, the right man taking half-step until his four has turned.

When the movement is completed, the chief of section commands:

Forward, March.

All take a full step.

AT A HALT.

S. Right Turn, Forward.

Same as on the march.

For a change of direction greater or less than a right angle, the command would be, RIGHT HALF TURN, RIGHT ABOUT TURN, etc.

Digitized by Google

SECTION.

Two Ranks and Single Rank, Two Files and Single File in Close Order.

S. Right Dress.

The ALIGNMENT is conducted on the same principle as for the front fours or flank fours of the square.

S. Right Face, etc.

All face to the right, etc.

S. Forward, March, etc.

ALL the FACINGS and MARCHES are conducted on the same principles as in square.

When a section in line marches by the flank, the GUIDES do not change unless the guide is named; in this case they go to the directing flank of the new front rank of their respective squads.

When a section in column marches by the flank, the guides go to their places in line on the flanks of the new front rank of their respective squads.

Digitized by Google

SECTION.

Two Ranks and Single Rank, Two Files and Single File, in Close Order.

A section in column of two files or single file marches to the front by the same principles as if in square. The column is opened out without special command, so as to leave marching distance between the forms. A section in column in close order may march a few steps at a time, without doubling the files or opening out on being cautioned not to open.

S. Right Turn March.

A section in line turns like the front fours of a square, in column like the flank fours.

Digitized by Google

SECTION.

Square in Close Order.

8. Into Ranks.

The guides take their new places on the prolongation of the front rank, allowing space for the rear fours to come up on the flanks.

The front fours face to the front.
The right rear four faces right.
The left rear four faces left.

March.

The rear fours march by the flank and then to the front and take their new places between the corporals and the front fours, each four immediately outside that which was in front of it in square. As soon as they arrive on the line all turn their heads and eyes to the right, and dress to the right. The chief of section commands:

Front,

when his section is satisfactorily aligned.

If there are two men in a set of fours, the left man goes to the rear rank; if there are three men, the rear man covers the man nearest the centre of the section.

Digitized by Google

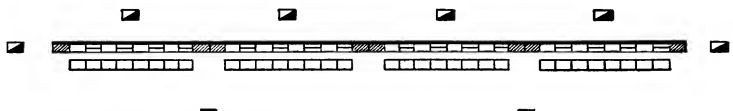
COMPANY AT FULL DISTANCE, IN LINE OF SECTION SQUARES IN CLOSE ORDER.



COMPANY IN TWO RANKS IN CLOSE ORDER.

Digitized by Google

SCHOOL OF THE COMPANY.

ORGANIZATION OF A COMPANY.

A company consists of one captain, one first lieutenant, one second lieutenant, six sergeants, eight corporals, and one hundred privates.

A COMPANY is divided into four sections, which are made as nearly equal as possible. In the right companies of the battalion the tallest men may be placed in the right section, and in the left companies in the left sections. The right sections constitute the first platoon, the left the second platoon. They are commanded by the first and second lieutenants respectively. The first and second sergeants are the right and left guides of the company. The SECTIONS are numbered from right to left, as follows: 3d, 1st, 2d, 4th. These numbers are not changed in the manœuvres, unless the company is re-

Digitized by Google

organized, but each retains its original designation. The third, fourth, fifth, and sixth SERGEANTS command the 1st, 2d, 3rd and 4th sections, respectively. For purposes of manœuvres the sections are divided into two SQUADS, of which the right is called the 1st, and the left the 2d squad. The squads retain their designations till the section is reorganized.

The first, second, third, and fourth CORPORALS of the company are assigned to command of the first squads of the corresponding sections; and the fifth, sixth, seventh, and eighth corporals to the second squads. The first and fifth corporals are also the right and left guides, respectively, of the 1st section, the second and sixth of the 2d section, etc.

Digitized by Google

POSTS OF OFFICERS, GUIDES, ETC., IN THE ORDER OF ASSEMBLY.

The lieutenants 2 yards behind the centres of the rear rank of their platoons.

The chiefs of section 46 inches in front of the centres of their sections. The right guide three quarter section distance to the right of the centre of the front rank of the right section. The left guide in a corresponding position on the left of the company.

Two (or four) privates from the company are detailed as company markers. In the assembly for roll-call the company markers fall in 46 inches behind the rear rank, the right markers behind the left guide of the right section; the left markers behind the right guide of the left section.

When a company is alone, or when all the companies that are drawn up together execute the same manœuvre simultaneously, the markers conform to the movements of the company, or they may be used instead of the chiefs of section in defining new positions.

Digitized by Google

THE ASSEMBLY.

Unless specially instructed to the contrary, the company is assembled at roll-calls in LINE OF SECTION SQUARES in close order, and at deploying intervals from each other. The company is therefore at full distance, but occupies only half a company front. When the sections are deployed, the company forms a line in close order in two ranks.

To assemble the company for roll-call, the first sergeant commands:

Fall In.

The left guide takes his place on the left of the right guide, who then goes with him to the point where the right of the first section square should rest, and faces to the left. The left guide then paces off section distance, to mark the point where the right of the second section should rest. He faces about, and is established on the line by the right guide. The chiefs of the first and second sections march their sections by flank to the line. The chiefs of section hasten forward and place themselves next to the

Digitized by Google

guides, facing to the front of the company and each with his left elbow touching the breast or back of the guide. The guides then face outward, pace off half section and section distance respectively, and put themselves on the prolongation of the line. The other sections are then established on the line in the same manner. The sections are dressed on the centre sections. The chiefs of section command *front* when the sections have dressed, and take their places in front of the centres of their sections.

The first sergeant then steps to the front of the company and receives the reports from the chiefs of the sections, who then go to their places.

Digitized by Google

C. Assemble in Square.

The captain places the right front marker in position, and establishes the left front marker on the line of the new front. The rear markers take their positions from them.

The guides then pace half section distance to the rear from the front markers.

The lieutenants place themselves on this line of the guides.

The right guide paces half section distance along the line to fix the right of the right front section, and the left guide paces section distance from this point to fix the right of the left front section.

The lieutenants go to the new places for the rear sections.

The sections are assembled in square.

March.

Each section is conducted to its proper place by its chief, who precedes it in time to take his place where the right is to rest. He halts his section and dresses it to the right.

All take their proper places in square.

Digitized by Google

C. Assemble in Line. March.

The centre sections are first established in the same manner as the front sections of the square.

The right guide fixes the position of the right section, and the left guide the right of the left section, under supervision of the lieutenants. All take their places in line. In action the positions are determined without pacing.

C. Rally by Company.

The CAPTAIN, assisted by the guides, places a marker wherever he wishes the right of a section to form. Each man runs to the nearest marker and falls in as for roll-call. If more than three non-commissioned officers rally at the same marker, the highest sergeant and corporals in rank remain and the others seek other sections. The lieutenants, aided by the guides, superintend the formation and equalize the sections if necessary. The markers and guides go to their places.

Digitized by Google

*** C. Rally in Line.**

The captain, assisted by the guides, places markers to indicate where the right of the sections is to rest. Each section is rallied by its sergeant, if not already so, who runs with it to the markers. The guides on their respective flanks indicate to the chiefs as they arrive where they are to establish their sections. The lieutenants superintend the formation.

***C. Rally in Square.**

Same as above, excepting that the markers are established in square.

A company may be rallied on any designated section, or on a guide who may be sent forward to select a new position.

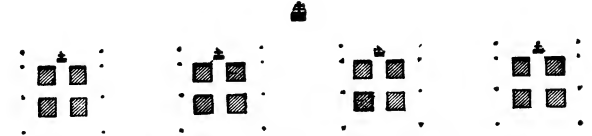
SCHOOL OF THE BATTALION.

ORGANIZATION.

A battalion consists of four companies and their officers, etc. It is commanded by a major, who is assisted in his tactical duties by an adjutant and sergeant-major for directors, two sergeants for guides, and four privates for markers.

When the battalion is assembled for roll-call, etc., it is formed in line of section squares, the battalion and companies being at full distance, and the sections in close order. The companies are disposed as follows from right to left: Third, first, second, fourth. The two right companies constitute the first subdivision, the two left the second subdivision.

Digitized by Google



BATTALION IN LINE OF COMPANY SQUARES.

BATTALION IN LINE OF SECTION SQUARES.

BATTALION IN TWO RANKS.

POSTS OF OFFICERS, GUIDES, ETC., IN THE ORDER OF ASSEMBLY.

Each captain is one-fourth section distance in front of the centre of the front rank of his company. The adjutant and sergeant-major one-fourth company distance from the rear rank and behind the centres of their respective wings.

The right guide three-quarters company distance to the right of the centre of the nearest company, and on a line with the front company markers. The left guide in a corresponding position on the left of the battalion.

Digitized by Google

THE ASSEMBLY.

To assemble the battalion for roll-call, parade, etc., the companies are formed on their parade-grounds and

Adjutant's Call

is sounded. The sergeant-major takes his place on the left of the adjutant; the right and left guides 46 inches behind them, and then the battalion markers in square in close order, the front markers 46 inches behind the guides. They then march to the battalion parade-ground, where the adjutant places the right front marker in position and establishes the left front marker on the proper line to fix the front of the battalion. The rear markers take their positions from them. The guides then pace half company distance to the rear from the markers. The adjutant and sergeant-major place themselves on the flanks of this line a little more than company distance outside the markers. The right guide paces half company distance along the line to fix the place for the right front company marker, and the same distance again for the left marker of the right

Digitized by Google

front company; from this point the left guide paces off the distances for the front markers of the left company. The markers of the flank companies are next established by pacing the distances from those of the centre companies. The adjutant and sergeant-major keep the guides on the proper line until the company markers are established. The companies are marched to their places, dressed on their markers, and deployed into line of sections. The adjutant, sergeant-major, and guides go their places as soon as the markers of the companies are established.

B. Assemble in Line. March.

This is executed in the same manner as the assembly for parade, excepting that the major fixes the front markers of the battalion.

B. Assemble in Square. March.

Same as above, excepting that the markers of the rear companies are fixed in their proper places by the adjutant and sergeant-major without pacing.

In action all the positions are fixed without pacing.

Executed as prescribed for the front companies of a square.

Column of Company Squares at Full Distance.

The major establishes the right markers.

B. Right Dress.

The adjutant and sergeant-major go to the line of the guides. The front guide faces about when his position has been verified by the adjutant.

The battalion is dressed upon the same principles as in square.

Digitized by Google

Line of Companies at Full Distance.

B. Forward, Guide Right, March.

The major indicates the points of direction to the right MARKER and establishes the left marker at right angles to this direction. The right GUIDE keeps company distance to the right of and half-company distance behind the right battalion marker. The left guide keeps half-company distance behind the line of the battalion markers.

The company markers and the left guide keep themselves at the proper distance from the guide or marker on their right. The guides maintain the company markers on a line with themselves.

If there are SEVERAL COMPANIES IN LINE OF SECTIONS, the proper distance from the company on the right will be estimated independently by the right GUIDE of the company and the right front MARKER. The former judges by his distance from the left guide of the next company; the latter by his distance from the left marker of the right company, both absolutely and relatively, to the left marker

Digitized by Google

of his own company. The right guide takes into consideration the position of the right marker as well as his own judgment, but if the guide of the right company is very near to him, he will give the most weight to his own distance from him.

In determining the line, the guide is always governed by the marker.

The LIEUTENANT supervises the position both of the guide and of the marker, and for this purpose he goes where he can best judge of the proper distance. He also sees whether the left guide of the right section comes behind the marker.

COLUMN OF COMPANIES AT FULL DISTANCE.

B. Forward, Guide Right.

The major gives the front guide a point to march on. The right front marker of the front company keeps the proper distance behind the battalion guide. The other right company markers follow.

The companies march as explained in the School of the Company.

Square at Full Distance.

B. For Combat, Four Hundred Yards Open Square. March.

The battalion opens to double distance, and then the front companies continue to advance until they are four hundred yards in front of the rear companies. As soon as the square has been opened the adjutant, sergeant-major, guides and markers go to the major. The guides keep 5 yards behind him, and the markers in square, at full distance, 2½ yards behind the guides, until their services are required.

After advancing 400 yards the front companies are halted by their chiefs, who command:

C. For Combat, Two Hundred Yards Open Square. March.

The company is opened as explained in the School of the Company.

*** B. For Combat, Treble Distance, Two Hundred Yards, Open Square. March.**

The same, excepting that all the squares

Digitized by Google

are opened to treble distance; the front companies advance two hundred yards; the front sections and fours one hundred yards.

*** B. For Combat, Four Hundred Yards Open Square. Front Sections, Half Company Distance, Open Front Line. March.**

The front fours of the first sections separate until they are at battalion distance.

*** B. For Combat, Four Hundred Yards Front, Companies and Sections Front. March.**

Executed on similar principles. The front units open line and the rear units remain at full distance, as already explained.

FORMATION FOR COMBAT.

B. To Full Distance, Rear Close Square.

B. To Two Hundred Yards Close Column, or Rear Close Column.

*** B. Rear Companies to Four Times Distance Open Line.**

*** B. Front Companies to Full Distance Close Squares.**

*** B. To Treble Distance, Right Rear Into Line, Etc., Etc.**

Are executed on the same principles as at

Digitized by Google

full distance. After forming for combat the line may be re-enforced in any manner that may be required. The four sections and companies on the firing line do not change their distances unless it is so specified in the command.

B. Companies and Battalion Rear Section and Companies, Centre, Into Line.

B. Platoons and Divisions Right Into Line.

B. Companies and Battalion into Line.

B. Right and Left Companies Right and Left Into Line, Battalion Into Line.

By these movements a line is formed covering $\frac{8}{16}$, $\frac{8}{10}$, $\frac{8}{5}$, or $\frac{8}{5} \times \frac{6}{4} = 1\frac{2}{5}$ of a battalion front; so as to make a firing line of about 2 men to a yard, $1\frac{1}{4}$ men to a yard, one man to $1\frac{3}{5}$ yards, or one man to $2\frac{2}{5}$ yards.

B. Companies and Battalion Right into Line.

Thus the line is extended, battalion front to the right, with one man to $1\frac{3}{5}$ yards.

B. Right Rear Company, Battalion Distance Right of Firing Line, at Double Distance, Half Left Into Line.

B. Left Rear Company Fifty Yards in Front of Firing Line, Treble Distance Into Line.

B. Right Rear Company, Centre of Firing Line, Close Order.

In this manner the line may be re-enforced, extended, or passed, or an offensive or defensive crotchet may be formed on either flank.

Square at Full Distance.

*** B. Eight, Four and Two Hundred Yards Forward, Open Front Lines. March.**

The rear companies stand fast. The front companies make a third of a turn outward, and advance 800 yards. Each captain then halts his company, turns it to the front, and commands:

C. Four and Two Hundred Yards Forward, Open Front Line. March.

The rear sections halt. The front sections make a third of a turn outward, and

advance 400 yards. Each sergeant halts his section, turns it to the front, and commands:

S. Front Fours Right Twos Front. March.

Executed by the right two of each of the front fours, as prescribed for FRONT FOURS FRONT.

S. Two Hundred Yards Forward, Open Front Line. March.

The corporals, followed by the twos, make a third of a face outward, advance two hundred yards and halt.

The squares are closed to full distance as in the formations for combat, etc.

SCHOOL OF THE REGIMENT.

The organization and manœuvres of the regiment are so similar to those of the battalion, that they will be readily understood by substituting COLONEL for **Major**, CAPTAIN for Chief of Section, etc.

APPLICATION TO THE HIGHER UNITS.

Will depend upon the Organization of the Brigades, Divisions, Army Corps, Armies, Grand Armies, etc.
